

Celebrating the Launch of the New Platform

BioOne Complete's new site (www.BioOne.org) successfully launched January 1, 2019. Our new platform, powered by a non-profit collaboration with SPIE (www.spie.org), the International society for optics and photonics, offers users a modern and easy-to-use interface.

The new site features several key improvements, such as streamlined off-campus access, a more powerful and agile search engine, and a new article organization feature called My Library. In addition, popular site features such as email alerts, saved searches, and mobile display have all been updated and enhanced. Get a brief introduction to the new site by reading *Get Started with BioOne Complete* (PDF, available at <https://bioone.org/help>) or by visiting BioOne Complete's new Help Center (<https://bioone.org/help>).

BioOne Complete remains at www.BioOne.org, and permanent redirects from old URLs are in place to maintain the stability of previously bookmarked links.

We are thrilled to share this new site with our community. If you have questions, please contact caroline@BioOne.org.

Full Score and Counting

In 1999, there was "BioX," a not-for-profit concept with big aspirations: to provide a cost-effective path for a bioscience publisher to create a digital online presence in a financially sustainable way. A short 20—one score— years later, BioOne has weathered the tech bust of 2000, recession of 2008, and the endless parade of technological, social, and economic changes that are transforming the scholarly enterprise.

Now a proven concept, BioOne has a bright future. We continue to demonstrate that there is a need for a not-for-profit model that benefits societies, independent publishers, researchers, and libraries, and not one at the expense of the other.

We celebrate the creative energy, persistence, and support invested by the entire scientific community in the success of BioOne.

Since BioOne launched its first collection of two score (40) journals in 2001, the organization has:

- Returned over \$45 million in royalties to its publishers
 - Grown to include 209 titles
 - Kept the annual cost to libraries at 90% less than the commercial average in biology
 - Reached more than 4,000 libraries and their patrons worldwide
 - Provided 26 titles open access through a sustainable fee-for-service program
-

From the beginning, BioOne has provided solid technology and service for publishers, researchers, and libraries, demonstrating our flexibility in response to the changing landscape. This year, BioOne celebrates its milestone by launching a new platform in true partnership with SPIE, a fellow nonprofit organization that shares our ethos for serving the scientific community.

Through 20 years of cultivation and careful husbandry, BioOne proudly serves a comprehensive collection of highly respected bioscience research that is increasingly relevant to the issues of climate change felt around the world. The organization is in an excellent position to evolve as its own environment changes, for we predict that there will be a need for a strong scholarly-aligned community three score years hence.

We cordially invite you to join the celebration by sharing your thoughts (<http://www.bioonepublishing.org/news/bioone-20-year-anniversary/>) about your own experience with BioOne. These will likewise become part of our collective history.

A handwritten signature in black ink that reads 'Susan Skomal'.

My Library - A New Tool To Organize your Research

My Library is a new tool available to BioOne Complete users which allows you to organize and manage articles relevant to your research or interests. Users can log into their account, browse content, and if an article looks interesting, send it to My Library to read later, or to collect with other key articles.

- 1. Folders** - Create folders to store and sort articles based on theme or project.
- 2. Download PDF, Move To, Add Note** - Download an article, move it to another location in My Library, or add a brief note.
- 3. View and Sort By** - Sort the articles in My Library or a specific folder by date added, publication date, or title.

Check out BioOne Complete's Help Section (<https://bioone.org/help/tools-and-features>) to learn more about My Library and other useful tools and features on the new site.
